                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                            AAY96583-87 are (partial) isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. cDNA libraries Se4, Sr1, SrrIc and sellc were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).

Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The cDNA and proteins can be used to isolate homologues, for immunological screening and for positive

AAV96583-87 are (partial) isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. CDNA libraries se4, sr1, srr1c and self twere prepared from soybean embryo (19 days after flowering).

Isoflavone O-methyltransferase catalyses the first step in degradation of daidacein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Plavonoids serve as Co-pigments in flower colour, stimulate pollen tube growth, attract pollenations in fruits and seeds. The CDNA and proteins can be used to insolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          63 ILQVPPTKTRQVQSLMRYLAHNGFFELVRIHDNIB-AYALTAASELLVKSSELSLAPMVE 121

                                                                                                                                                                                                                                                                     AAY96583-87 are (partial) isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. cDNA libraries se4, sr1, srr1c and sellc were prepared from soybean embryo (19 days after flowering), root, 8-day old root and seed (25 days after flowering).

Isoflavone O-methyltransferase catalyses the first step in degradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollenators, act as feeding deterrents and protect against UV irradiation in fruits and seeds. The cDNA and proteins can be used to insolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          62

AAY96583-87 are (partial) isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. CDNA libraries se4, sr1, srrlc and sellc were prepared from soybean embryo (19 days after flowering), root, 9 day old root and seed (25 days after flowering).

Isoflavone O-methyltransferase catalyses the first step in odgradation of daidzein. Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Flavonoids serve as co-pigments in flower colour, stimulate pollen tube growth, attract pollentors, act as feeding deterrents and protect against uv irradiation in fruits and seeds. The CDNA and proteins can be used to insolate homologues, for immunological screening and for positive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TKTROVOSLMRYLAHNGFFEIVRIHDNIE-AYALTAASELLVKSSELSLAPMVEYFLEPN 127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               188 NWVFEGLESIVDVGGGTGITAKIICEAFPKLKCMVLERPNVVENLSGSNNLTFVGGDMFK 247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  298

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAY96583-87 are (partial) isoflavone O-methyltransferases isolated from various soybean (Glycine max) tissues. CDNA libraries se4, sr1, srr1c and ss1c were prepared from soybean embryo (19 days after flowering).

1 soflavone O-methyltransferase catalyses the first step in degradation of daidzein Suppression of this enzyme will yield higher concentrations of this beneficial isoflavone in, e.g. soybean seed. Plavonoids serve as pollemators, act as feeding deterrents and proteins cup irradiation in fruits and seeds. The object against UV irradiation in fruits and seeds. The object and for positive isolate homologues, for immunological screening and for positive

A vector containing the DNA can be used to transform a microbe for the recombinant preparation of the enzyme. The enzyme can be used to prepare a secondary metabolite of a plant derived from reticuline which is useful as a raw

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a caffeic O-methyltransferase, encoded by a cDNA clone (see AAX25200) isolated from a line A643 cDNA library. The invention provides methods and compositions relating to altering lignin biosynthesis and composition of plants. Isolated nucleic acids (see AAX25196-216) that code for plants. Isolated nucleic acids (see AAX25196-216) that code for colling (see AAY05657-77) involved in lignin biosynthesis are claimed. Also claimed are recombinant expression cassettes, host cells (especially maize or sorghum), and transgenic plants and seeds. The claimed nucleic acids can be used to transform a plant to modulate lignin biosynthesis. A claimed method involves transforming a plant cell with a recombinant expression cassette comprising a lignin biosynthesis polynucleotide operably linked to a promoter, growing the plant cell under plant growing conditions, and inducing expression of the polynucleotide for a time sufficient to modulate (preferably increase) lignin biosynthesis in the plant. The plant lignins can be used as a fuel source, immunestial of increased lignin content can be used as a fuel source, immunestial of increased lignin content can be used as a fuel source, immunestial of increased lignin content can be used as a fuel source, immunestial of increased lignin content can be used as a fuel source, immunestial of increased lignin content can be used as a fuel source, immunestial of increased lignin content can be used as a fuel source, immunestial case and in the pulp and paper industry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11 ASEIFQGQALLYKHLLGFIDSKCLKMNVELDIPDIIHSHSHGQPITFSELVSILQVPPTK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a caffeic O-methyltransferase of maize, encoded by a clone (see AAX5201) isolated from a line A632 library. The invention provides methods and compositions relating to altering lignin biosynthesis and/or the lignin composition of plants. Isolated mucleic acids (see AAX5196-216) that code for plants. Isolated mucleic acids (see AAX5196-216) that code for colling (see AAX05657-77) involved in lignin biosynthesis are claimed. Also claimed are recombinant expression cassettes, host cells (especially maize or sorghum), and transgenic plants and seeds. The claimed nucleic acids can be used to transform a plant or modulate lignin biosynthesis. A claimed method involves transforming a plant cell with a recombinant expression cassette computating a lignin biosynthesis polymucleotide for a time sufficient a promoter, growing the plant cell under plant growing conditions, and inducing expression of the polymucleotide for a time sufficient computations can be used as a fuel source, material of increased lignin content can be used as a fuel source, and in the pulp and paper industry. Decreased lignin content

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22-JUN-1999
23-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3-JUN-1999
            11;
cancoded by a clone (see AAX25202) isolated from a maize line B73 cDNA library. The invention provides methods and compositions relating to altering lighin biosynthesis and/or the light composition of plants. Isolated nucleic and/or the light code for plants. Isolated nucleic acks (see AAX25196-216) that code for proteins (see AAV6567-77) involved in light biosynthesis are claimed. Also claimed are recombinant expression cassettes, host seeds. The claimed nucleic acks can be used to transform a plant cells (especially maize or sorghum), and transgenic plants and cransforming a plant cell with a recombinant expression cassette comprising a plant cell with a recombinant expression cassette comprising a plant cell with a recombinant expression of assette comprising a plant cell with a recombinant expression of and inducing expression of the polynucleotide operably linked to a promoter, growing the plant cell under plant growing conditions, and inducing expression of the polynucleotide for a time sufficient to modulate (preferably increase) light biosynthesis in the plant. The plant lightin content can be used as a fuel source, material of increased light content can be used as a fuel source, and in the pulp and paper industry. Decreased light content caps.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         214

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      65 QVPPTKTRQVQSLMRYLAHNGFFEIVRIHDNI-EAYALTAASE--LLVKSSELSLAPMVE 121

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 4,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
